Volume 20, January–June 1983

CONTENTS

Atomic and Molecular Physics

Theoretical calculation of electron-impact resonance excitation of alkali atoms.....*C S Singh, R Srivastava and D K Rai* 157–162

Infrared and Raman studies of some naphthols.....*S Ram, V N Pandey and S N Thakur* 163–174

Relative strengths of the competing multipoles in the K and L series x-ray spectra in the NR limit.....*V S Edlabadkar and Chintamani Mande* 175–182

Study of isotope shifts, isotone shifts and nuclear compressibility from the analysis of muonic x-ray transitions.....*K V Subba Rao and A A Kamal* 363–374

Collision induced transitions of ammonia. Calculation of relaxation times T_1 and T_2, line widths, line shifts, and the double resonance effect .....*K Tanaka, J E Boggs and S C Mehrotra* 439–449

Elastic scattering of positrons by helium and lithium.....*S S Tayal* 451–456

A new approximation method to obtain vibration eigenfunctions suitable for a new oscillator model.....*B S Navati and V M Korwar* 457–466

Classical Mechanics

Generalised direct action and absorber theory of radiation .....*R V Kamat* 193–215

Crystallography

A Mössbauer study of octahedral site symmetries in systems $Co_xMn_{3-x-y}Fe_yO_4$ and $Ni_xMn_{3-x-y}Fe_yO_4$.....*V K Singh and S Lokanathan* 1–5

Cation distribution of the systems $Zn_{1-x}Co_xFeMnO_4$ by x-ray, electrical conductivity and Mössbauer studies.....*P S Jain and V S Darshane* 7–17

Crystal structure of N-*m*-tolyl phthalimide.....
.....*K Chandrasekhar, Vasantha Pattabhi and S Swaminathan* 19–22

Huang diffuse scattering from interstitials in a general orthorhombic and tetragonal lattice.....*Rita Khanna* 267–277

Diffuse x-ray scattering near Bragg peaks from point defects in a general lattice.....*Rita Khanna* 279–286

General Relativity

Viscous fluid motion around the Kerr-Newmann black hole.....
.....*S K Saha* 245–249

The structure of the space of solutions of Einstein's equations coupled with scalar fields.....*R V Saraykar* 293–303

Liquids

Modified Grüneisen and Anderson-Grüneisen relations for quasispherical molecular liquids.....*B K Sharma* 91–103

Mathematical Physics

On an integral over the surface of *N*-dimensional unit sphere.....
.....*Nazakat Ullah* 131–135

Density expansions of viscosity coefficient.....*A K Heblekar* 405–414

Solitons in a linear lattice with defects.....
.....*V Narasimha Iyer and K S Viswanathan* 415–428

Note on the soliton-like solutions of some nonlinear theories and transformations among them....*G P Malik, J Subba Rao and Gautam Johri* 429–438

Nuclear and Particle Physics

Masses and some electromagnetic properties of charm and *b*-quark hadrons in a bag model with a variable bag pressure.....*P K Chatley* 143–156

Weak neutral current effects in elastic electron deuteron scattering.....
.....*M V N Murthy, G Ramachandran and S K Singh* 221–244

A search for superheavy nuclei tracks in extraterrestrial olivine crystals..
J S Yadav, A P Sharma, G N Flerov, V P Perelygin, S G Stetsenko, P Pellas, C Perron, R Antanasijevich, B Jakupi and Y Todorovick 287–292

Local charge compensation in the quark-cascade jet-production model..
.....*S P Misra and B K Parida* 375–386

Classical description of low energy $^{16}O+^{16}O$ collisions.....
.....*A N Dixit, V S Ramamurthy and Y R Waghmare* 523–546

Nuclear Instrumentation

Dead time corrections to photocounts and clipped correlations of Gaussian light.....*S K Srinivasan* 547–558

Plastics as nuclear track detectors for thermal neutron dosimetry.....
.....*S M Farid, A P Sharma and S A Durrani* 559–567

Optics

The dynamics of a mode locked and frequency-doubled laser.....
.....*R M Vasu and K P Jagannatha Reddy* 55–64

Generalised pencils of rays in statistical wave optics.....*R Simon* 105–124

Plasma Physics

Low frequency surface waves in the presence of an external high frequency electric field.....*N Gopalaswamy and S Krishan* 23–40

Transmission of sonics through ionised medium: Damping considerations
.....*A P Saxena and N S Suryanarayana* 41–46

Electron beam fusion, energy compression, and the absolute instability
.....*R Jones* 47–54

Multiple focus formation in a Mather gun device.....
.....*Anurag Shyam and M Srinivasan* 125–130

Quantum Mechanics

Fluid-dynamical representations of the Dirac equation..*Sambhu N Datta* 251–265

Solid State Physics

Viscosity behaviour of binary mixtures of non-polar solvents..... ..... *Mridula Chauhan, Rajni Misra, Amar Singh, J P Shukla and M C Saxena* 77–84

Radiation damage in polyacrylonitrile..... ..... *M Ramakrishna Murthy and S Radhakrishna* 85–90

Optical absorption spectrum of Ni^{2+} ion doped in synthetic lecontite.... ..... *S V J Lakshman and T V Krishna Rao* 137–142

Raman scattering study of $LiKSO_4$—phases II and III..... ..... *M L Bansal, S K Deb, A P Roy and V C Sahni* 183–192

Studies on Co-Sn-Te thin films..... *J G Bamane and H V Keer* 305–312

Quadrupole interaction of tantalum impurities in bismuth metal..... ..... *S N A Jaaffrey and J Varma* 387–392

Charge imbalance due to thermoelectric effects in superconductors—A two fluid description..... *B A Mattoo and Y Singh* 393–404

Jet produced by collapse of conical free surface of a metal by plane shock wave..... *H S Yadav, S S Sachdeva, I J L Jaggi and C P S Tomar* 477–489

Pseudopotential theory of effective interaction in simple metal..... ..... *A Sarkar, D Sen and S Sengupta* 491–501

Diffuse x-ray scattering from self-interstitials in zinc..... *Rita Khanna* 503–515

Electric field gradients in niobium pentachloride dimer .... *G Krishna Kishore, V Anjaneyulu and G Satyanandam* 517–521

Statistical Mechanics

Thermodynamics and structure of simple dense fluids..... *S K Datta* 313–325

Perturbation theory for equilibrium properties of a binary mixture of hard discs..... *U N Singh and S K Sinha* 327–337

Bounds on the effective thermal conductivity of two-phase systems..... ..... *R N Pande, V Kumar and D R Chaudhary* 339–346

On the virial coefficients of the equation of state of a system of non-axial molecules..... *S Singh* 347–357

Random matrix theory and the statistical mechanics of disordered systems
.....*Jitendra C Parikh* 467–476

Statistical Physics

On information, negentropy and thermostatistics....*C G Chakrabarti* 65–72

Connectivity constant of the kagomé lattice.....
.....*Krishna Bhadra and C K Majumdar* 73–75

Perturbation theory for a microemulsion with triangular well potential
.....*M C Somasekhara Reddy and A Kamalakara Murthy* 217–220
